
Developing RIA using Spring Boot and Angular

Angular is known for building rich, data-driven, single-page applications (SPAs) while Spring Boot is a popular and powerful framework for back-end development. In this training, you will learn how to work with Spring Boot and Angular technologies and then how to integrate them together to build a full stack web application.

Topics

- Introduction to SPA and Angular
- Developing Basic Angular Application
- TypeScript
- Building with Angular Components
- Angular Binding and Events
- Forms
- Pipes
- CSS Styling
- Dependency Injection
- HTTP, Promises, and Observables
- Routing
- Directives
- The Multi-Threaded Web
- Building and Tools: Angular-CLI, SystemJS, JSPM, WebPack
- Developing RESTful Services using Spring Boot
