## *Siebel Technical Foundations Rel 15.5*

---

This Siebel Technical Foundations training is appropriate for Siebel 15.x and 8.x customers. Develop a technical foundation for understanding Siebel applications, including navigation, querying, architecture, data model, object types and more. Hands-on labs are performed using Open UI.

### **Objectives**

- Navigate Siebel applications
- Run server jobs
- Identify object types and their relationships
- Use Siebel Tools to examine object definitions
- Inspect and test business services and workflows
- Administer and test a Siebel web service
- Administer list of values
- Create, maintain, and query data
- Describe access control
- Identify the role of each piece of the Siebel architecture
- Identify the various Siebel clients
